

Minimally Invasive Knee (MIK) Retractor System

The Symmetry Medical Minimally Invasive Knee (MIK) Retractor System is based on clinical use and surgeon feedback. The complete system features custom, silicone handles for maximum function and comfort and unique shapes for MIK surgery.

The MIK Retractor System includes distinct retractors:

- Hohmann
- Superior
- Collateral
- Condylar
- Patellar
- Soft Tissue

The MIK Retractor System addresses several factors necessary for successful Total Knee Replacement (TKR) Surgery and Unicompartmental Knee Replacement (UKR). Visibility during a minimally invasive approach is critical to ensure proper bone resections, ligament balancing and implant placement.

The MIK Retractors also protect soft tissue and ligaments. Several of the instruments are designed to provide retraction and also help prevent the saw blade from cutting through ligaments on the opposite side of the incision site.

Symmetry Medical's MIK Retractor System provides excellent visibility and unparalleled surgeon comfort during long TKR and UKR procedures.

Maximum Function

Product Descriptions

MIK RETRACTOR SYSTEM

- **Small Hohmann Retractor**

(Part #13-035-000)
Used during initial dissection and designed to improve exposure of proximal tibia.

- **Large Hohmann Retractor**

(Part #13-036-000)
Wide Hohmann style blade for general retraction of large muscle groups.

- **Condylar Retractor**

(Part #13-037-000)
"J" curved blade used to retract soft tissue surrounding medial and lateral tibia during dissection.

- **Superior Retractor**

(Part #13-038-000)
Gentle radius of retractor designed to retract superior capsule without placing undue stress on skin incision.

- **Patellar Retractor**

(Part #13-039-000)
Windowed retractor blade captures patella, minimizing tension to patellar tendon and eliminating need for patella eversion.

- **Soft Tissue Retractor**

(Part #13-042-000)
Versatile soft tissue retractor used during exposure and initial bone resections.

- **Collateral Retractors**

(Left Part #13-040-000 and Right: Part #13-041-000)
Protect medial and lateral collateral ligaments from saw blade during proximal tibial resection.
